Model Number

SLCT-M-01-1500

Inclined mirror for stable 90° deflection with cover plate

Features

- Rotation-invariant deflection of a light beam by 90° in the plane of incidence, making it highly vibration-resistant
- Translation-free deflection with no lateral beam shift with OMH-SLCT-200 floor mount
- Silver-coated mirror glass
- Mirror glass with low light absorption
- Up to Ø 48 mm pencil of rays in the plane of incidence

**Application**

The inclined mirror is arranged so that light beams from the emitter can be deflected to the receiver. To deflect the protection field through 90°, the inclined mirror is positioned at an angle of 45°.

When aligning the layout, ensure that all components are arranged vertically and at the same height. To roughly align the inclined mirror, turn it so that you can see the receiver reflected in the mirror when looking at it with the emitter behind you.
